

IR - Sadtler Nucleic Acids, Nucleosides & Nucleotides - Wiley

Spectra - 1,450

Description

This database contains 1,450 infrared spectra of nucleic compounds. It can be used in the identification, classification, and verification of these materials and was compiled for those who are researching molecular processes.

Additional Information

Each compound is identified by its chemical name and method of analysis, as well as structural formula, molecular formula, and molecular weight. Synonyms, melting point, boiling point, literature references, and comments are also displayed when available.

This data has been subject to the Sadtler Data Review Protocol™ to provide researchers the highest standard in spectral data today. These rigorous qualifying procedures start at data acquisition and continue throughout the database development process.
